

Deeper Lorosfyr Weather

After a certain amount of time spent in extreme temperatures, a creature must make a DC 10 Constitution saving throw or receive one level of exhaustion. The DC increases by 5 each time the save is rolled. The DC is reduced by 5 for every hour spent recovering in comfortable temperatures (effectively 0 cold or heat, 1 in appropriate clothes).

Frostmire

Level	Category	Time between saves
1	Mildly Cold	--
2	Cold	1 hour
3	Severely Cold	30 minutes
4	Extremely Cold	10 minutes
5	Incredibly Cold	5 minutes

Cinderwastes

Level	Category	Time between saves
1	Mildly Hot	--
2	Hot	1 hour
3	Severely Hot	30 minutes
4	Extremely Hot	10 minutes
5	Incredibly Hot	5 minutes

*Disadvantage on save unless you drink twice normal amount of water (2 gallons/day)

Precautions

Precautions can be taken to prepare against extreme weather, whether hot or cold. Warmth or cooling can increase or decrease the temperature level you need to deal with.

Clothing

For calculating temperature change, use whichever gives the warmest category (or least cool); these do not stack with each other.

Clothing Type	Temperature
Cold weather clothing	+2 warmth
Heavy armor/clothing	+1 warmth
Light/no clothing	+1 cooling
Hot weather clothing	+2 cooling

Other Precautions

Other precautions can increase warmth or cooling.

Apparatus	Temperature
Fanning, cool mist, etc.	+1 or more cooling*
Fire, thermal vent, etc.	+1 or more warmth*
Fire resistance	+3 cooling in heat
Cold resistance	+3 warmth in cold

*Effectiveness varies based on strength of source

Resting

Temperature: Must be comfortable (level 0 cold or heat, can rest at level 1 in appropriate clothing). This applies to short and long rests.

Food

Food	Effect
Cold food/drink	Adv on next save vs heat
Hot food/drink	Adv on next save vs cold

Wilderness Travel and Survival

Travel Distances and Speed

Pace	Hour	Day	Effect
Fast	4 miles	30 miles 5 hexes	-5 to passive Perception
Normal	3 miles	24 miles 4 hexes	--
Slow	2 miles	18 miles 3 hexes	Able to use stealth

Difficult Terrain: Travel half the distance in the same amount of time.

Boats: Assuming half the party is controlling it, a boat is expected to travel at around the same speed as standard travel.

Exhaustion: When at 3 exhaustion, you travel at half the usual pace (simplified for convenience). You can cure 1 level of exhaustion by finishing a long rest and getting enough food and water for the day. You can attempt to cure another level of exhaustion with a DC 15 Constitution check when you finish a long rest; on a failure, you can still spend half your hit dice (4) to succeed instead.

Resting: A character can travel for up to 4 hours before needing to take a short rest. A character can safely travel up to 8 hours in a day before requiring a long rest.

Travel Activities

- ◆ **Marching Order:** Establish a marching order of characters. Up to 2 per rank allowed.
- ◆ **Stealth:** If not traveling in the open, characters can attempt to stealth while moving at a slow pace.
- ◆ Each character can do one additional action during a day's travel (see right column for options).

Noticing Threats

A character can keep an eye out for threats, using their passive Perception. Depending on the location in marching order, a character may have a harder time noticing certain angles of attack.

Draw a Map

A character can spend time drawing a map as they travel. Doing so can help the party figure out where they are if lost.

Tracking

A character can make a Wisdom (Survival) check to follow a creature's tracks (see DMG pg. 244)

Foraging

A character can forage for food and water with a Wisdom (Survival) check. Each character who forages makes a single check. On a success, a character finds 1d6+Wis pounds of food, and 1d6+Wis gallons of water.

Food and Water Availability	DC
Limited food and water sources	15
Very little, if any, food and water sources	20

A character typically needs 1 pound of food and 1 gallon of water per day. The need for water is doubled in hot weather.

Navigating

A character can navigate to prevent the party from getting lost with a Wisdom (Survival) check when needed (such as during a snowstorm or sandstorm). A slow pace grants a +5 bonus while a fast pace grants a -5 penalty to the check.

On a failed check, the group heads in a random direction (determined by the DM).
